REEL_LIBRARY.exe RUNNING...

Make Your Reels with the Reel Library

320 animations, ready for Claude.

SCREENSHOT

▲ The library site: categories on the left, the search box at the top, and the three buttons you need in this guide.

In One Minute

The Reel Library is a free website with **320 ready-made elements for short vertical videos**: text animations, captions, transitions, effects, graphics, filters, lights and whole video styles. Each card shows a live preview, says when it works best, and gives you a **prompt** that tells Claude how to make it for your own video. You pick, Claude builds.

Open it here: duduexe.github.io/ai-lab/06_reel_library

The Whole Thing in 5 Steps

1. **Pick the vibe of your video** ▶
2. **Mark the moments in your clip** ▶
3. **Pick one item per moment** ▶
4. **Ask Claude to build them** ▶
5. **Check, render and post**

What You Need Before You Start (5 Minutes)

1. **Claude.** A normal chat on claude.ai or in the Claude app is enough to plan your reel and get the code. To have Claude build and render the video files on your computer, use **Claude Code** (a paid plan, Pro or higher, see Claude plans).
2. **Your clip,** filmed vertically. The prompts use 1080 x 1920, the size of a phone video. If your clip is horizontal, tell Claude its size.
3. **Remotion and its skill for Claude.** Remotion makes videos from code, and it is free for individuals and small companies. In Claude Code, run `npx skills add remotion-dev/skills` once, then ask `Set up a Remotion project for a 1080 x 1920 reel`.
4. **Your colours and fonts** (optional). The prompts set none, so every item takes your own look.

GOOD TO KNOW

No Remotion? Claude can also make an item in plain HTML and CSS, or explain how to make it in your usual editing app. Remotion is the easiest way to let Claude do everything for you, from the first animation to the finished video.

New to Claude and Remotion?
My step-by-step guide 04 "Animate your videos with Claude and Remotion": set up, first animation, render.

Open on GitHub ↗

What Is Inside the Library

Category	What you find	Examples
1 Text	Text animations (In, Out, Loop), caption looks, animated titles	Pop in, White + stroke, Hook Headline
2 Video transitions	How one shot moves to the next	Zoom-Through, Whip pan in
3 Video effects	Effects on your footage, some around your face or body, and zooms	Punch-in zoom, Glitch
4 Graphics animations	Charts, cards, lists, app windows, files, doodles, characters	Big Number, Checklist, Marker Line
5 Filters	A colour look for the whole video	Warm Movie
6 Lights	Light added on top of your footage	Warm movie light
7 Videography styles	How the whole video looks and how it is made	Reels talking head, Paper craft collage

Each item has the same four parts: what it does, **Best used when**, where it comes from, and the **Prompt** to make it from scratch.

Three Ways to Use the Library

All three give Claude the same prompts. Pick the one that fits how you work.

WAY 1

Copy one prompt

Find one item on the site and paste its prompt into Claude.

Best for one animation · 2 min

WAY 2

Download everything

One text file with every item. Give it to Claude once.

Best for a whole reel · 3 min

WAY 3

Install the skill

Claude knows the library and looks items up by itself.

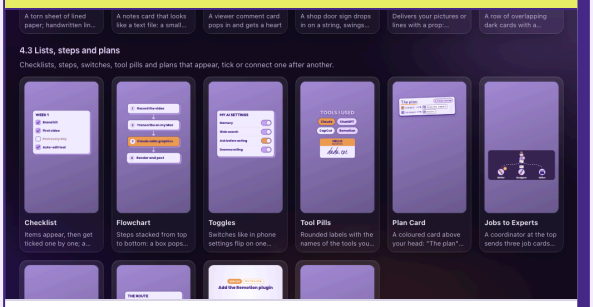

Best if you make reels often · 5 min, once

WAY 1 Copy One Prompt

2 minutes

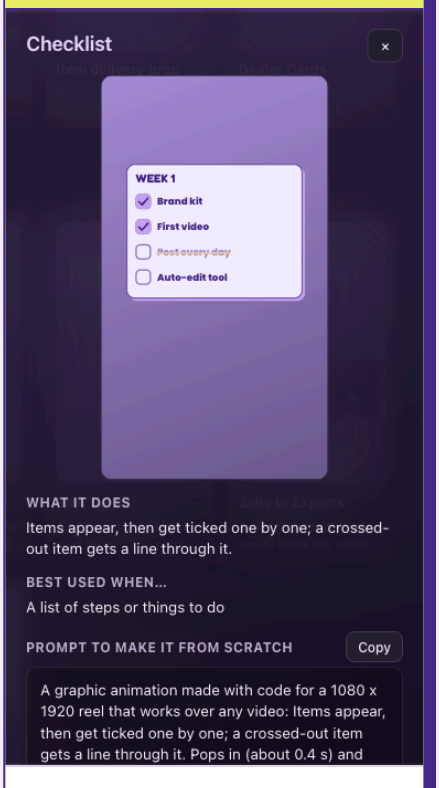

1. **Open the library** at duduexe.github.io/ai-lab/06_reel_library.
2. **Find an item.** Browse the categories on the left, or type in the search box at the top, for example `zoom`, `phone` or `glitch`. Hover a card to see it move (on a phone, tap it).
3. **Click the card.** Its details open on the right: what it does, when to use it, and the prompt.
4. **Press Copy** next to the prompt, paste it into Claude, and add your details: the text to show, the time in your clip, your colours.

SCREENSHOT

▲ Cards in "4.3 Lists, steps and plans". Hover one to see it move, click it to open it.

SCREENSHOT

▲ The details of "Checklist". Press **Copy** to copy the prompt.

HOW TO READ THIS GUIDE

`orange` type or paste exactly this

Bold a button, menu or setting to click

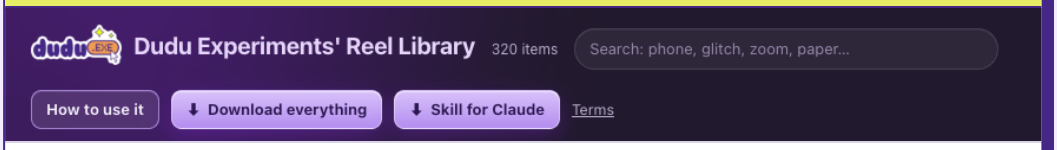

GOOD TO KNOW explains things, no action

SCREENSHOT what you see on the library site

WAY 2 Download Everything

3 minutes

SCREENSHOT

▲ The buttons at the top of the site: **How to use it**, **⬇ Download everything** and **⬇ Skill for Claude**.

1. **Press ⬇ Download everything** at the top of the site. You get one text file, **video-animation-library.md**, with every item and its prompt (no pictures). It lands in your Downloads folder.
2. **Give it to Claude.** Attach the file to a chat, or add it to a **Claude Project** so every chat in that project knows the library.
3. **Ask for items by name,** for example `Use "Checklist" from the attached library`, or ask Claude to suggest items for your script (prompts on page 7).

WAY 3 Install the Skill

5 minutes, once

GOOD TO KNOW

A "skill" is a set of written instructions that teaches Claude a new job. This one holds the whole library, so you can just ask `Make my reel with a Shatter transition at 0:12` and Claude finds the item by itself. Adding it does not install any program.

First, press ⬇ Skill for Claude at the top of the site. A ZIP file called **video-animation-library-skill.zip** lands in your Downloads folder. Then follow the part for the Claude you use.

In the Claude app (normal chat)

1. **Open Customize.** In the Claude app, click **Customize** in the left menu.
2. **Click + Add, then Upload skill.** On the **Skills** tab, click **+ Add** (top right), then **Upload skill**.
3. **Upload the ZIP.** Drag the ZIP from your Downloads folder into the box, then click **Upload**. No need to unzip it.

SCREENSHOT what you see on the library site

In Claude Code (on your computer)

1. **Unzip the skill.** Double-click the ZIP. You get a folder called **video-animation-library**.
2. **Open the skills folder.** Mac: in Finder, click **Go > Go to Folder...** (Cmd + Shift + G), type `~/.claude/skills` and press **Enter**. Windows: in File Explorer, type `%USERPROFILE%\.claude\skills` in the address bar. If the folder does not exist, create it.
3. **Drag the video-animation-library folder** into the skills folder. Add Remotion's skill too (page 2).

Make a Reel, Step by Step

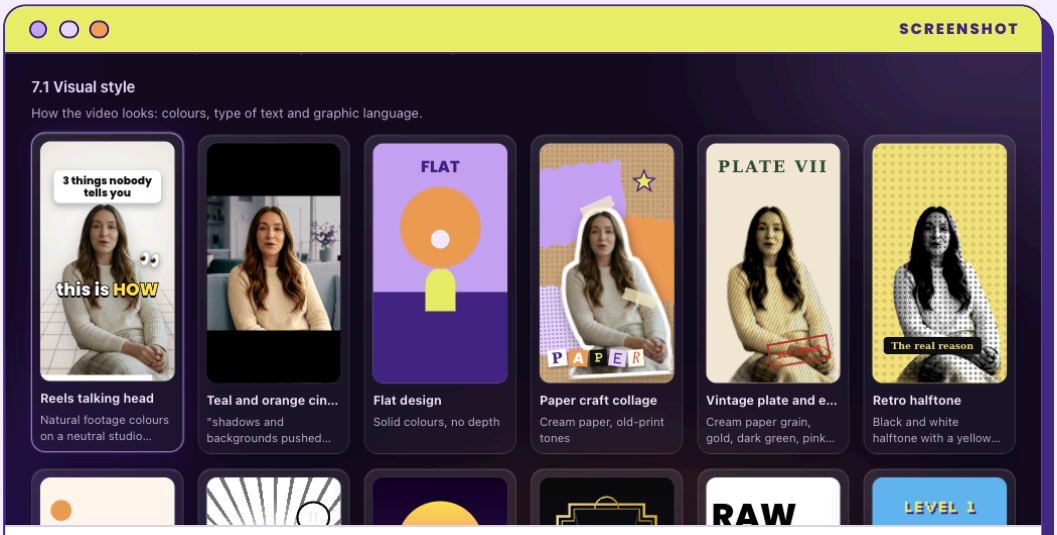

The same six steps work for every reel, whichever of the three ways you use.

1 Pick the Vibe

2 minutes

In **7 Videography styles**, choose one **visual style** (how it looks) and one **realisation style** (how it is made). Tell Claude both, so every item fits together.

SCREENSHOT

▲ "7.1 Visual style": each card shows the whole look of a video, from a classic talking head to a paper collage.

2 Mark Your Moments

5 minutes

Write down the times in your clip: the **hook** (the first 3 seconds), each **new point**, a **reveal**, and the **ending**. For example: hook 0:00 to 0:03, first point 0:07, list 0:10 to 0:18.

3 Pick One Item per Moment

10 minutes

Moment	Where to look
The hook	A title from **1.3 Animated titles**
Between two parts	A transition from **2 Video transitions**
A number or a list	A graphic from **4 Graphics animations**
A key word	A zoom from **3.3 Zoom**
The whole video	One caption look from **1.2**, and if you like one filter (**5**) and one light (**6**)

SCREENSHOT

▲ "1.2 Caption animations": pick one caption look for the whole video.

4 Ask Claude

2 minutes

Give Claude your clip, the library (the file or the skill), the items with their times and texts, and your colours and fonts. Change the details in this example and paste it:

COPY & PASTE

```
I am making a 30 second vertical reel (1080 x 1920, 30 fps) where I talk to the
camera about how I plan my week. My clip is attached. Use the attached reel
library and add:
- "Hook Headline" from 0 to 3 s with the text "I let AI plan my week"
- "Punch-in zoom" on the word "free" at 0:07
- "Checklist" from 0:10 to 0:18 with: plans, meals, workouts
- "Marker Line" under the last sentence
- captions in the "White + stroke" look, and the "Warm Movie" filter
Build it with Remotion as layers over my clip. My colours are #1E90FF and #FFD23F,
my font is Poppins. Before you render, show me a frame at the start, middle and
end of each animation.
```

5 Check Before Rendering

5 minutes

Ask Claude for **a frame at the start, middle and end of each animation**, and look at them before the video is made. Fix what you do not like in plain words, for example `bigger`, `later` or `less orange`.

TIP

Change one thing at a time and ask for the frames again. It is much faster than rendering the whole video after every change.

6 Render and Post

5 minutes

- **With Claude Code:** ask `Render my reel`. Claude makes the finished MP4 on your computer.
- **With your own editing app:** ask Claude to render only the animated layers (with a see-through background), then put them over your clip in your app.
- **Before you post:** watch it once on your phone, with the sound on, and check that no text sits under the app buttons.

Prompts to Start With

One item

COPY & PASTE

```
Make the "Zoom-Through" transition from this library for my reel: my clip is 1080 x 1920 at 30 fps, the cut is at 0:12. Use my colours #1E90FF and #FFD23F. Build it with Remotion and tell me how to drop it into my video.
```

Ideas for your script

COPY & PASTE

```
Here is my script for a 40 second reel: [paste your script]. Using the attached library, suggest one visual style and one realisation style from section 7, then the best item for each moment (hook, each new point, the ending). One main animation per moment, never three at once.
```

The whole reel prompt is in Step 4 (page 6).

HOW TO READ THIS GUIDE

`orange` type or paste exactly this

Bold a button, menu or setting to click

GOOD TO KNOW explains things, no action

SCREENSHOT what you see on the library site

Tips for Good Results

- **Use item names exactly** as they are in the library, so Claude finds the right one.
- **One main animation per moment.** A reel feels busy fast; let the words breathe between animations.
- **Keep text away from the app buttons** on the right and the caption area at the bottom. The prompts already ask for this.
- **Items in 3.1 AI effects need your face or body:** they use a see-through cut-out of you, which Claude can help you make with a free tool. Graphics in **4** go over any video.
- **Fonts, music and sounds are not included.** Use ones you have the licence for.
- **If something looks wrong,** send Claude a screenshot of the frame and say what you expected. A picture explains it faster than words.

Good to Know (Limits)

- The prompts are written for vertical videos (1080 x 1920). For another size, tell Claude the size first.
- The demo person in the previews is AI-generated and does not exist.
- Claude makes each item again from its prompt, so your version can look a little different from the preview. Ask for changes until it looks right.
- Making a whole reel uses a good part of your Claude plan's usage.

Copyright

© 2026 Dudu.exe. Compiled and made by Dudu.exe. All rights reserved.

- You may use the previews, prompts and skill to make your own videos, and post the videos you make.
- You may not sell, copy, republish or share this library, this guide or their content, in full or in part.
- The Dudu.exe logo and name may not be reused. Fonts, emoji and Remotion keep their own licences: see LICENCES.md.
